

HEX.COM

World's First Blockchain Certificate of Deposit

HEX.COM has outperformed almost every other asset on the planet since launch less than 2 years ago. 100 HEX 623 days ago is now worth 1,000,000. Yes, you read that right, HEX is up over 1,000,000% at the time of writing. HEX was designed to go up over 10,000x in under 2.5 years; it has achieved that in under 2 years. What's unique about HEX is its staking feature. If you had staked that 100 HEX instead of just holding it for that time period, you would now have over 1,500,000. HEX pays you for holding. HEX is just getting started!

The Future of Investing Is Here

Certificates of Deposit (CDs) are common investment tools managed by banks. CDs are used by hundreds of millions of people worldwide, creating a market valued in the trillions of dollars. HEX has taken the concept of CDs, added significantly higher average interest rates, removed banking fees, and turned it into a decentralized cryptocurrency. By locking any amount of HEX you choose for a period of time between 1 and 5,555 days, you "stake" your deposit and gain interest every single day. Average APY for a bank CD is less than 2%. HEX eliminates retail entities, bureaucracy, or overhead, and no bonuses are awarded to anyone besides users who stake HEX. As a simple-to-use, high-interest investment tool, HEX makes you the bank.

HEX Is The First Blockchain Certificate of Deposit

CDs, known as Certificates of Deposit or Time Deposits, are worth trillions of dollars. CDs are worth more than gold, credit card companies, and cash. CDs pay higher interest than savings accounts, requiring money be deposited for a fixed time. Banks profit on poor customer service, early withdrawal fees, and auto-renewing you at worse rates. They pay pitifully low interest. New money is printed all the time, making yours less valuable. HEX replaces inefficient currencies, banks, and payment networks with verifiably secure peer-to-peer technology. HEX has outperformed Bank CDs because it's nothing like a Bank CD. HEX monetizes the time value of money in a totally new way. In HEX, you're the bank.

HEX Pays 40% APY on Avg

By locking any amount of HEX you choose for any period of time (*between 1 and 5,555 days*), you "stake" your deposit and gain interest every single day. Average APY in HEX is over 40%. Average APY for a bank CD is less than 2%. Every day HEX stakers earn interest. HEX stakers make additional interest when people end their stakes earlier or later than they committed to.

HEX Has 100% Uptime

HEX has operated perfectly since launch a year and a half ago. HEX has had 100% uptime while so many other things failed. Cryptocurrency was invented to remove middlemen and the need to trust other people with your money. Math is more trustworthy than man. HEX fulfills this ideal. HEX does its magic with no management, no promises, and no expectations of work from others. Individual users minted every coin into existence, just like Bitcoin. Understanding HEX helps you understand Bitcoin. HEX performs well solely due to its design and community.

HEX Has Transparent Trading

You can provide the PLS or PRC20s that you hold as liquidity to PulseX and earn yield on them. This is less risky than trading and allows you to earn predictable income on your crypto. Cryptocurrencies have the highest yields in the world, far exceeding those of other asset classes.

HEX Has No Off Switch

HEX is censorship resistant and robust by being truly decentralized on the blockchain. Anyone can run the HEX code, and the HEX community has released numerous open source tools which make it even easier. If HEX.COM were to go offline, HEX keeps working.

Many projects claim to be decentralized, but actually rely on administrators to not change the code. The HEX code cannot be changed. This is why many developers are so comfortable building on top of HEX.

HEX Is More Secure

HEX has had 2 independent security reviews and 1 economics review. Bitcoin, for instance, has none. HEX solves one of the most dangerous bugs Bitcoin and other cryptocurrencies have had because HEX's consensus code can't be edited. Bitcoin has had 2 bugs where someone could mint as many free Bitcoin as they wanted. One bug was exploited, and the other was caught in time. Bitcoin and HEX comparison.

HEX is truly changing lives for the better; you are probably annoyed if this is the first time you are hearing about HEX. That's because HEX hasn't been on page one of CoinMarketCap due to gate-keeping, HEX is not listed on any major exchange, and there haven't been many news articles about HEX. Yet HEX has outperformed everything despite that. Think about what HEX can achieve when all the above changes, which it will. How long can you ignore a 300 Billion market cap crypto? What about a 1 trillion crypto? The answer is you can't! You are not too late to the party.

To find out more, visit [HEX.COM](https://hex.com). STOP MISSING OUT on the best performing asset there is!

Buy HEX, Stake HEX and sit back & relax.

P.S. Criminals are mailing modified hardware to people to steal all their crypto. Beware any hardware wallets you receive. It will be amazing if this letter both saves thousands of people from losing their life savings and helps fund medical research! To learn more, google: modified hardware wallet.
